

FOR IMMEDIATE RELEASE:

Storage Tank Management Integrated with Fueling Management Software

End-to-end fuel management solution consolidates fuel control for fleets

San Antonio, TX, October, 2018 – E.J. Ward, Inc., announces the integration of OMNTEC’s PROTEUS series tank level gauging and sensors with Ward’s Fuel View automated vehicle fueling software.

With Fuel View, fleet managers no longer need multiple software programs to maintain their site’s fuel requirements. Storage tank levels, fuel condition, leak detection, and inventory control are effectively overseen and reported through the same software used to manage a vehicle’s fueling. The user customizes automated triggers and alarms for the fastest response time possible.

“This partnership gives fleet managers a powerful tool for insight and control over their fueling trends and costs that they have not had before,” said Markay Ward, President and, CEO. “Managing their fleet’s entire fueling management in one software will allow them to make knowledgeable, cost-saving decisions quickly and effectively.”

Fuel View’s tank level management features are also easily integrated with other tank gauges and sensors.

Since 1974, E.J. Ward, Inc. has been the industry leader, and at the forefront of fleet fuel management technology development. Ensuring accountability and security of fuel usage by public and private fleets globally, Ward’s Solution Suite provides significant savings for its customers through organization-wide Automated Fuel Management, GPS based Asset Tracking and Enterprise Application Integration.
